# Home Screen

On this screen, users see all the metro lines,  
frequency,

status, last update.

You can access to options at de top-left or, to  
lines details

on each block.

# Detail Screen

User want to know details on each line.

Certainly, it's clear that the primary feature is to receive notifications when there are issues on the subway lines the user has selected. The user saves their chosen lines and schedules, and they receive alerts based on these parameters. They can also access the details directly from these notifications.
